

**IN THE SPECIFICATION:**

The specification as amended below with replacement paragraphs shows added text with underlining and deleted text with ~~striketrough~~. No new matter has been presented.

Please REPLACE paragraph [0014] with the following paragraph:

**[0014]** These and/or other aspects and advantages of the invention will become apparent and more readily appreciated from the following description of preferred embodiments, taken in conjunction with the accompanying drawings of which:

FIG. 1 is an exploded perspective view of a part of a refrigerator having a door control device, according to an embodiment of the present invention;

FIG. 2 is a top view of the part of the refrigerator having the door control device of the present invention;~~and~~

FIG. 3 is a top view of the part of the refrigerator having the door control device of the present invention, and showing the operation of the door control device of the present invention;  
and

FIG. 4 is a top view of the part of the refrigerator having the door control device according to another embodiment of the present invention.

Please REPLACE paragraph [0016] with the following paragraph:

**[0016]** FIG. 1 is an exploded perspective view of a part of a refrigerator having a door control device according to an embodiment of the present invention. FIG. 2 is a top view of the part of the refrigerator having the door control device. FIG. 3 is a top view of the part of the refrigerator having the door control device, showing the operation of the door control device of the present invention. FIG. 4 is a top view of the part of the refrigerator having the door control device according to another embodiment of the present invention.

Please REPLACE paragraphs [0027] and [0028] with the following paragraphs:

**[0027]** In an embodiment of the present invention, the movable bar has four grooves to change the open angle of the door between four angles. However, it should be understood that the number of grooves formed on the movable bar may be changed to five or more grooves, or

three or less grooves, in order to change the number of open angles of the door which may be selected by a user, as desired. In addition, the grooves for seating the roller of the control unit may be formed on a separate member mounted to a side surface of the movable bar, as illustrated in FIG. 4.

**[0028]** The control chamber which receives the first spring of the control unit may be integrally formed on the sidewall of the leg casing by outwardly depressing the sidewall, as shown in the drawings. Alternatively, the control chamber may be defined in a separate member which is provided at a predetermined position around the sidewall of the leg casing, as illustrated in FIG. 4.
